Art Unit: 1644

1. Claims 26-37 are pending.

2. Applicant's election with traverse of Group XIX in the reply filed on 8-5-04 is acknowledged. The traversal is on the ground(s) that a search of the literature for references relevant to claim 26 will uncover art relevant to claim 30. This is not found persuasive because art on claim 26, such as detecting B cell disease will not read upon claim 30 drawn to detecting T cell diseases.

The requirement is still deemed proper and is therefore made FINAL.

3. Claims 30-37 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 8-5-04.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 26-29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The recitation of either or both in base claim 26, line 6 is confusing because either the glycoprotein marker is upregulated or downregulation and said change is indicative of a disease state, not both at the same time.

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 26-29 are rejected under 35 U.S.C. 102(a) as being anticipated by Bergmann et al.

Art Unit: 1644

Bergmann et al., detects CDSG by detecting decreased glycosylation on CD22 on B cells from patients with CDSG, a genetic disorder, by using a CD22-Ig fusion protein.

The prior art teachings anticipate the claimed invention.
